

Checkout what has changed in Simpplr One

## Features as of 25.12:

This resource details the new core features in Simpplr One. Please note that this document is subject to change as we continue to develop and deploy new features. Here's a link to [25.12 Release Notes](#).

Enabled= On, but requires additional setup. Live= feature active & running.

## Unified App Management Features:

We've enhanced your application management experience with new features that remove CRM limitations, improve scalability, and give you better control over your integrations and in-app security.

We understand you may already have established solutions for these items. Your upgrade team will provide a list of required actions for these areas. For more details, refer to the **Integration Setup** task in the upgrade portal.

This list is only visible to App Managers.

Feature Name	Enabled/live	Resource Link
Improved Role & Permission Management	Live	<a href="#">Help Article</a>
In-app Native User Management	Live	<a href="#">Help Article</a>
Strengthened In- App Native Integration Management	Live	N/A

Audience Based Access Controls	Enabled in Sandbox	<a href="#">Help Articles</a>
Forms	Only available with ABAC	<a href="#">Help Article</a>
Polls	Only available with ABAC	<a href="#">Help Article</a>

# Additional Upgrade Details:

**Blogs:** We are building a new dedicated Blog functionality directly into Simpplr One, slated for release in the first half of 2026.

What this means for your existing blogs: For clients leveraging Simpplr Classic's blog, the current process is to create a public site and ask to add blog posts as pages.

Once the new Blogs are rolled out, clients will have these two options:

- Option A (Continue Current Use): Your existing blog-style Pages will remain fully accessible in their current public sites and will not be impacted.
- Option B (Adopt New Feature): Once the new Blog functionality is available, you will have the ability to simply copy and paste the content from your existing Pages into the new, dedicated blog post format.

**Polls:** Enhanced Polls with Audience-Based Access Controls, which is slated for release Jan '26.

A net new Poll functionality is under development for Simpplr One. This feature is associated with Audience Based Access Controls (ABAC) for more targeted feedback.

Due to the fundamental shift in how this new feature works, historical poll data will not be transferred during the upgrade.

If your team wishes to retain this data, you can proactively request that the upgrade team pull your historical poll data for your records. Please coordinate this request with your Simpplr contact.

**Featured Sites for Segmentation:** The Audience Based Access Control (ABAC) enhancement, will change how featured sites work for segments. You'll no longer need to manage them at the segment level because sites are mapped to audiences. App managers and the Manage Sites Access Control Groups Manager will be able to update the features sites directly by navigating to Sites> Featured> Add/Update.

Please note, these changes don't impact your end users visibility.
